

HADP Unit Performance

Assessing performance to maximize impact

Context | HADP

Under the Holistic Agriculture Development Programme (HADP), the Government of Jammu & Kashmir is supporting the establishment of beneficiary-led units across agriculture and allied sectors through subsidy-based interventions. The programme aims to enhance agriculture sector's GSDP share, generate employment, and strengthen value chains across the UT.

Each intervention has a predefined **unit cost**- the benchmark cost used by the government for that activity. Subsidy is linked to this benchmark, not independently set by the beneficiary. In most cases, subsidy disbursement is **back-ended**, i.e., released after the unit is established and functioning.

Context | Output Tracking in HADP

To monitor outputs post subsidy disbursement, the Kisan Sathi Output Tracking App (OTA) has been introduced to track key metrics such as revenue, profit, and employment generated by these units. Field level functionaries visit the units and track performance data directly using the app.

In addition, some interventions require beneficiaries to complete **LMS-based training**, which may influence unit performance. While large-scale tracking has been enabled, there is limited clarity on which units are delivering the highest impact relative to subsidy support, constraining effective decision-making on future resource allocation and current interventions.

Questions

1. Based on the unit-level dummy [dataset provided](#), define what “**performance**” means in the given context and create **relevant metrics** to assess unit performance.
2. Identify high and low-performing units and **analyze key patterns** across sectors, districts, or unit types.
3. Recommend how subsidy allocation can be redesigned to improve overall impact, and suggest interventions required to support underperforming units.

Suggestive Guidelines

1. Use Excel to structure and analyze the dataset (e.g., derive relevant metrics, segment units, identify patterns).
2. Consider multiple dimensions of impact (e.g., income generation, employment, efficiency of subsidy utilization).
3. Highlight key trade-offs, if any, in defining performance (e.g., higher income vs higher employment).
4. You are expected to explicitly explain the rationale for prioritisation of metrics.

Instructions

1. Please submit your response in the form of a **1-slide presentation** (excluding title and end slides) using the provided template.
2. **Excel calculations should be linked** in the slide, wherever applicable.
